

Supplementary Fig. S3. Bar graphs of pairwise t-tests comparing the 40 tumor-containing common histomic cluster across the three common histomic clusters (CHC)-categorized groups. Bar graphs displaying pairwise t-tests for the 40 tumor-containing CHCs across three categorized groups: Highly differentiated (HD; green), intermediately differentiated (ID; pink), and lowly differentiated (LD; blue). The y-axis represents the percentage of CHCs present in each group. CHCs with significantly higher percentages in one group compared to the others are highlighted with a colored box matching the group. Statistically significant comparisons are indicated by asterisks, with details provided in the legend.
