

Supplementary Fig. S2. Ascitic fluid cytology. (A) No malignant (NM) cells, only inflammatory cells. (B) Non-ovarian cancer (NOC) case representing a case of breast cancer showing 3-dimensional ball-like clusters admixed with mesothelial and inflammatory cells. (C) High grade serous ovarian carcinoma (HGSOC) showing papillary and small aggregates of tumour cells admixed with inflammatory cells. (D–F) immunohistochemistry on corresponding cell block positive for PAX8 (D), WT1 (E) and p53 (F) (A–C, Papanicolaou stain; D–F, immunoperoxidase stain).
