

Supplementary Fig. S3. Correlation heatmap of immune cell subsets in high-grade serous ovarian carcinoma ascites. Spearman correlation matrix showing relationships among tumour, lymphoid, and myeloid cell populations quantified by flow cytometry. Colour scale represents correlation coefficient (r), ranging from -1 (red, negative correlation) to $+1$ (blue, positive correlation), with white indicating no correlation. PD-1, programmed cell death 1; PD-L1, programmed cell death ligand 1; EpCAM, epithelial cell adhesion molecule; Treg, regulatory T cell.
