

Supplementary Fig. S5. Response to chemotherapy, survival, and comparison of immune cell subsets. The top panel displays histopathology of the omentum, on which the chemotherapy response score (CRS) is assigned. (A) Chemotherapy response score (CRS1) or no response. (B) Chemotherapy response score (CRS2) or intermediate response with tumour cells and response to chemotherapy in the form of macrophages and fibrosis). (C) Chemotherapy response score (CRS3) or complete response with no tumour cells. Bottom panel shows the overall survival (OS) and progression-free survival (PFS) and intergroup comparison showing CD22 decreased in CRS 3 group (responders) as compared to CRS1/2 (non-responders).
